CytoCut Needle

CytoCut is a single-use chiba needle, designed by MDL, composed of medical-grade stainless steel that boasts a triple-sharpened cannula and stylet. The two parts are perfectly coupled to prevent the removal of foreign tissue while introducing the cannula.

Features:

- CytoCut tip's geometry and rigid materials enable a straight introduction.
- Centimeter markings
- Depth stopper, and a luer lock for easy connection to a syringe.
- The echogenic markers on the cannula facilitate needle positioning during ultrasound guidance.
- The stylet hub is color-coded according to international standards for easy identification of the gauge size.
