GTK18

Disposable ultrasound needle guides can help to improve the accuracy and safety of ultrasound-guided procedures by providing a stable platform for needle insertion and guiding the needle to the target area, these guides can help to reduce the risk of complications such as organ damage, bleeding, and infection. They can also help to reduce the time required for procedures and improve overall patient outcomes.

Features:

- Ultrasound-guided transrectal prostate procedures, transvaginal biopsies, and transvaginal ovum retrieval procedures
- Sterile & disposable
- The disposable design reduces the risks of infection & cross contamination
- All disposable needle guides are compatible with 16G-18G sizes instruments
- Compatible with well-known endocavity ultrasound probes on the market
- FDA Cleared
