Osteoj Needle

The **Osteoj** biopsy device is designed for optimal performance and safety during bone tissue biopsies. Featuring an ergonomic T handle, it ensures precise control and even pressure distribution for seamless insertion into cortical bone.

Features:

- **Enhanced Penetration:** The fish mouth-sharpened cannula tip facilitates efficient penetration into bone tissue.
- **Secure Rotation Coupling:** Prevents unwanted stylet movement, ensuring stability throughout the procedure.
- **Trocar-Tipped Stylet:** Enables fast and minimally invasive entry into cortical bone.
- **Extraction Wire:** Provides specimen measurement and adds safety during extraction.

Included accessories:

- **Luer Cap:** Prevents blood loss by sealing the needle handle during biopsy.
- **Luer-Lock Handle:** Maintains blood control during specimen extraction.
- **Safety Cap:** Protects the cannula point prior to extraction.
