PickUp Needle

The **PickUp** bone marrow biopsy needle is designed to deliver precise, safe, and efficient tissue extraction without luxation. This innovative device features an external catching system that ensures smooth tissue retrieval, minimizing patient discomfort and enhancing procedural accuracy.

Features:

- **Ergonomic T-Handle:** Specially engineered to distribute pressure evenly, optimizing control during insertion into cortical bone.
- **High-Quality Cannula:** Made from tempered stainless steel, the cannula includes centimeter markings for accurate depth measurement and a fish mouth-sharpened tip for smooth penetration.
- **Secure Rotation Coupling:** Prevents unwanted stylet movement, ensuring stability during insertion.
- **Trocar-Tip Stylet:** Enables quick and minimally invasive entry into cortical bone, reducing procedural time and patient discomfort.
- **Extraction Wire:** Facilitates easy measurement of specimen volume and adds an extra layer of safety during extraction.
